BASIC GUIDE CORTEX

The everyday tasks, step by step, on the real platform: signing in, finding a person, asking the assistant, granting and revoking access, reading the audit trail.

3 Signing in

4 The workspace

5 A second factor, when an action asks for one

6 Subjects: everyone the tenant holds

7 One subject, opened

8 Customers: the 360° overview

9 Knowledge: collections of documents

10 The agent, before a grant

11 Granting one person one collection

12 Who may reach it

13 The agent, after the grant

14 Asking the assistant

15 Configuring an AI provider

17 Encryption keys

18 Integrations (webhooks)

19 The audit trail

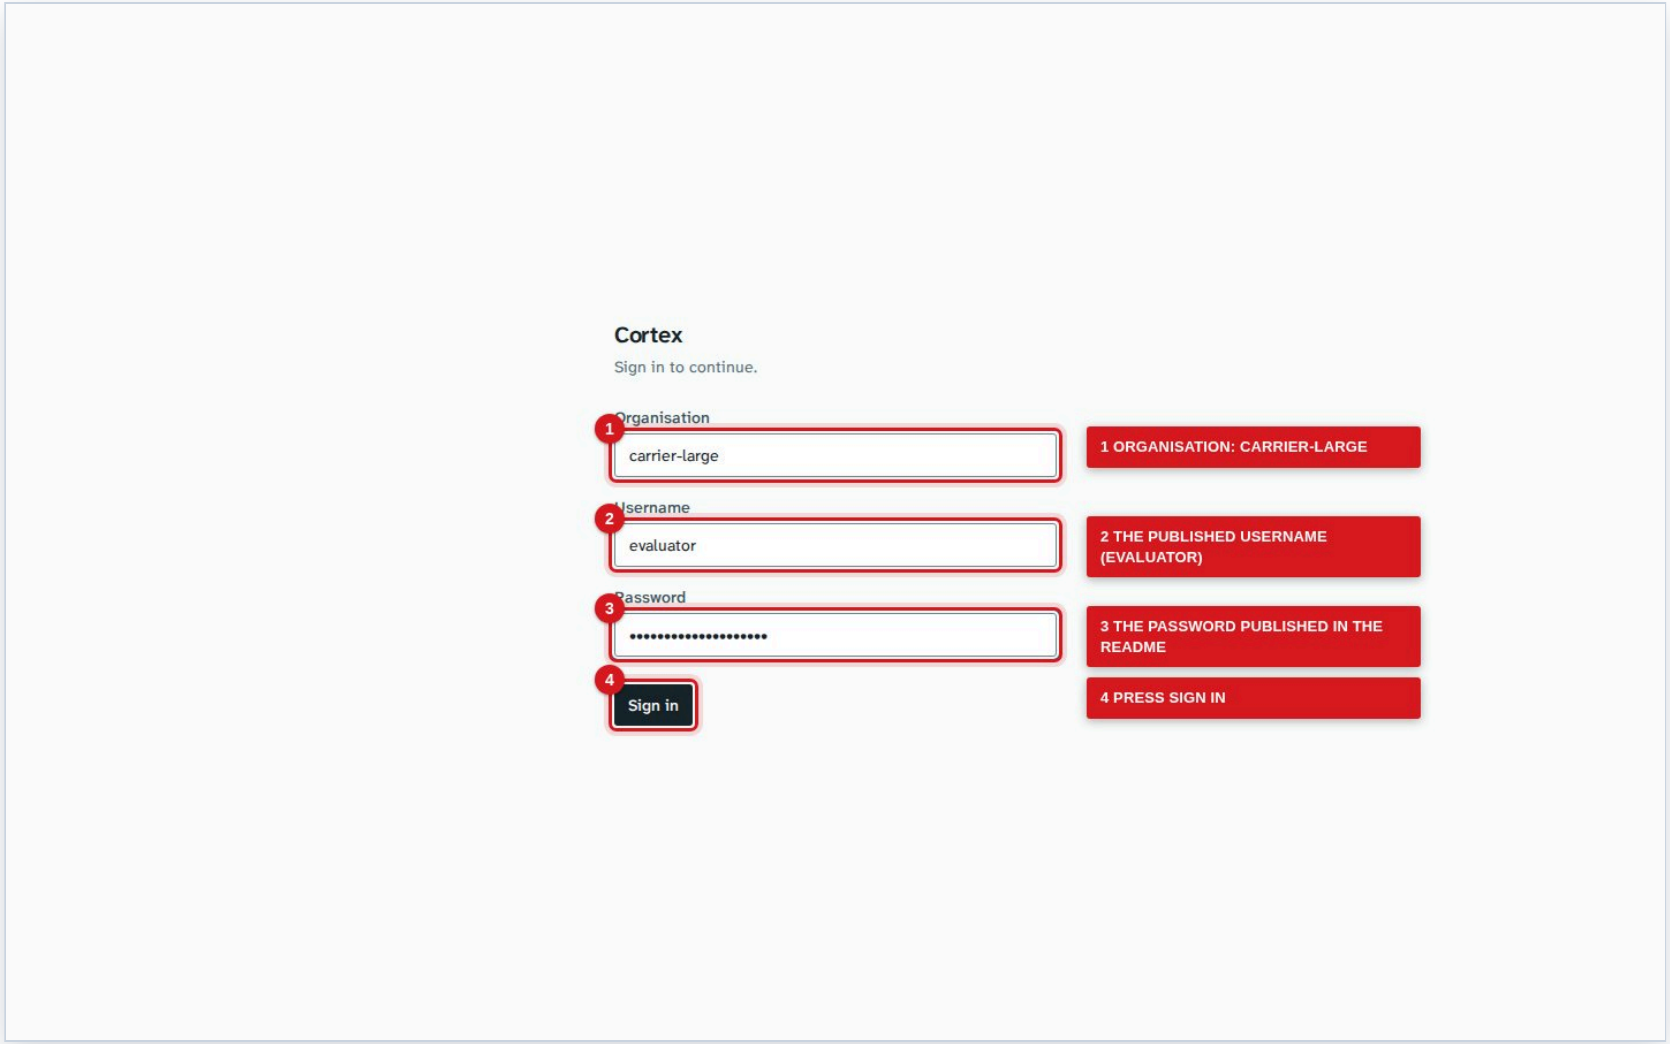

20 Revoking access

21 Your sessions and password

CORTEX BASIC GUIDE

Signing in

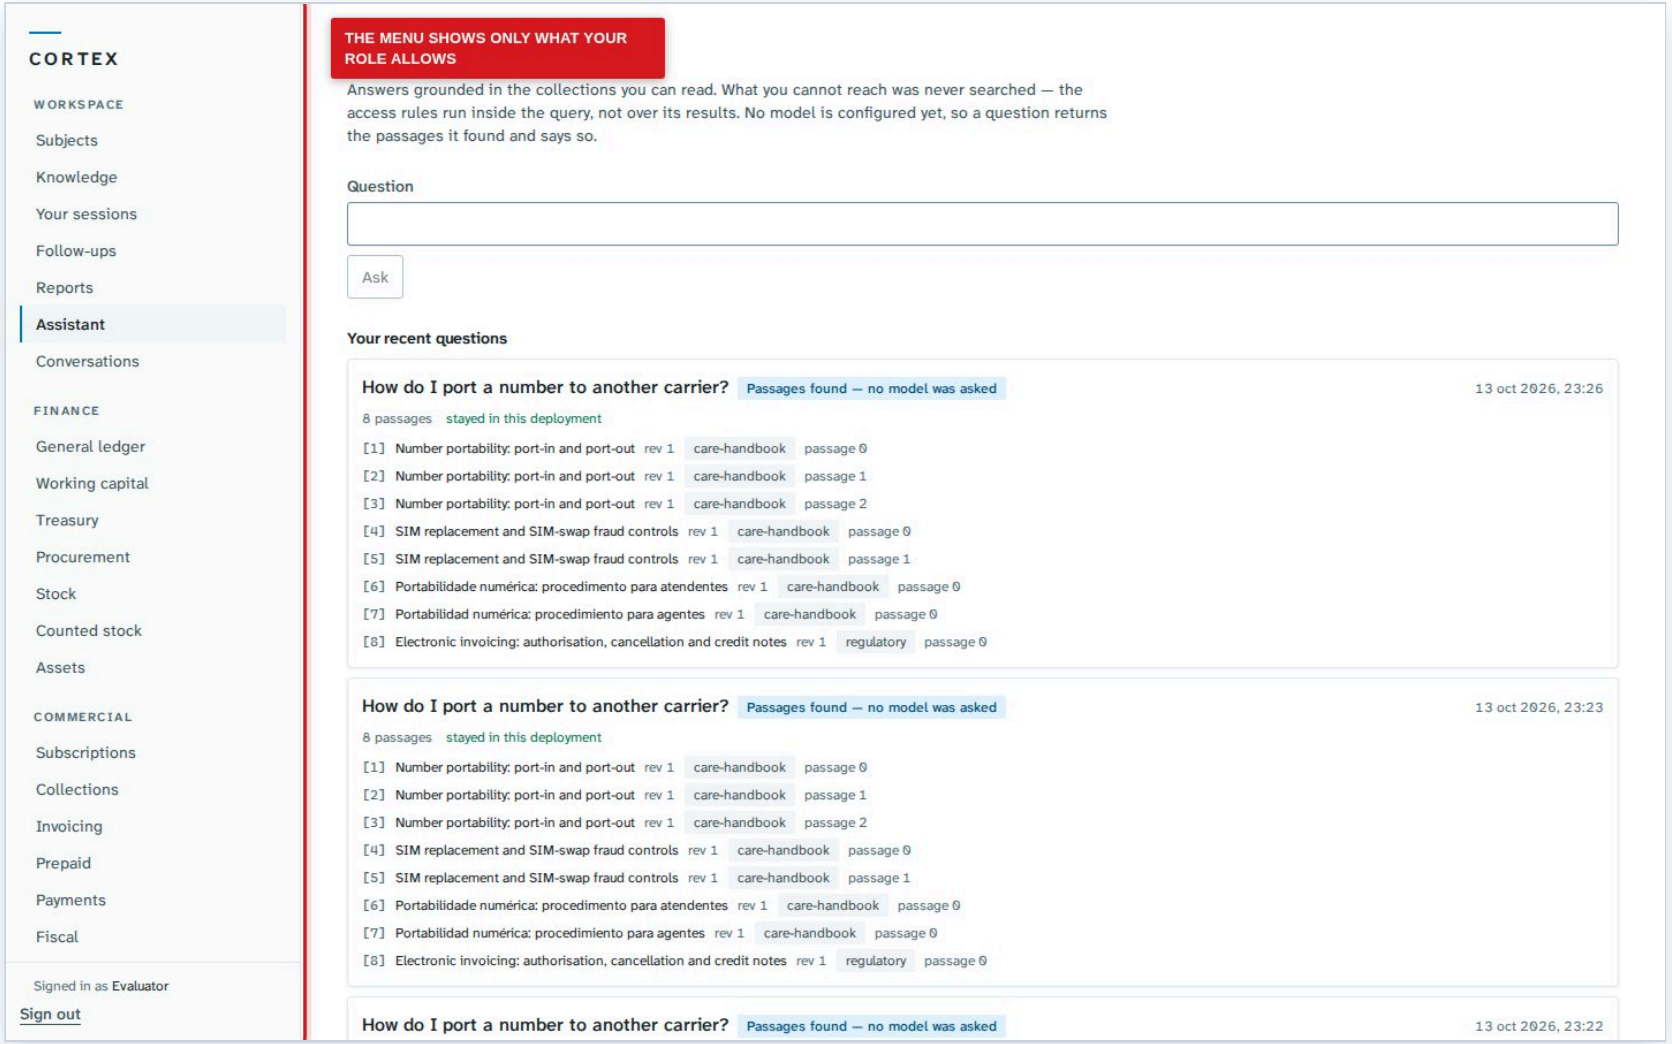

Organisation, username and password, then Sign in.

CORTEX BASIC GUIDE

The workspace

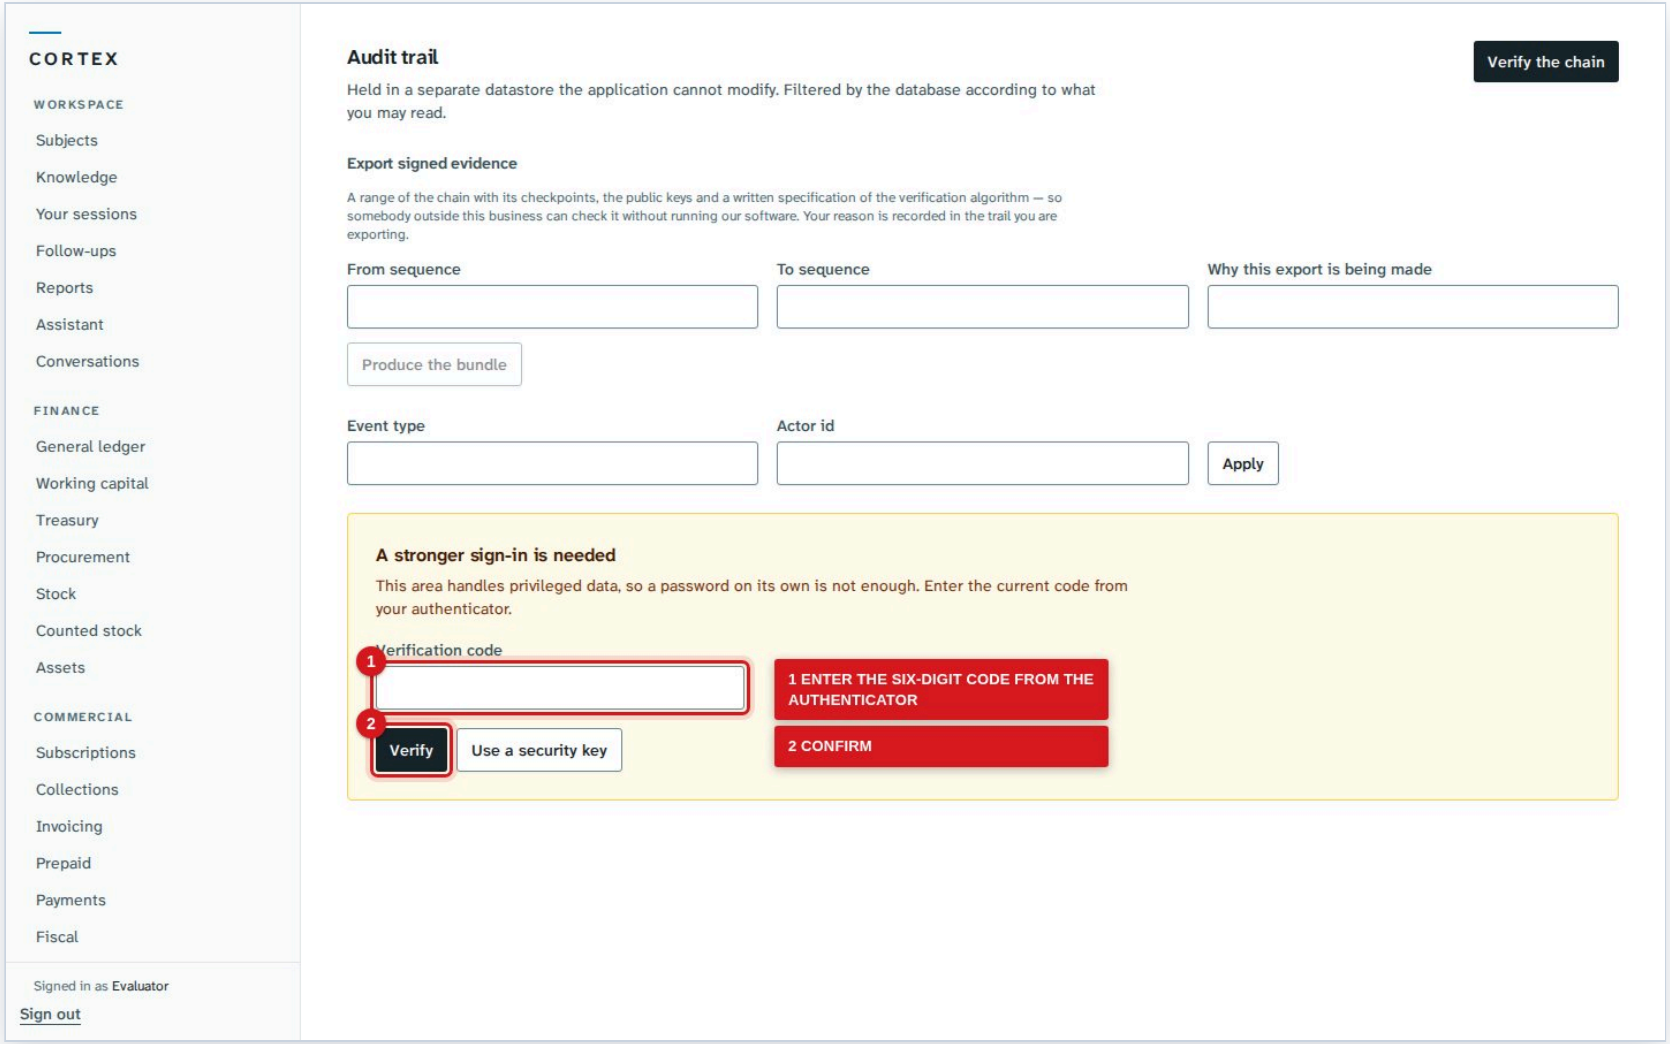

Every screen this account may use, grouped by area. What it may not use is not shown at all.

CORTEX BASIC GUIDE

A second factor, when an action asks for one

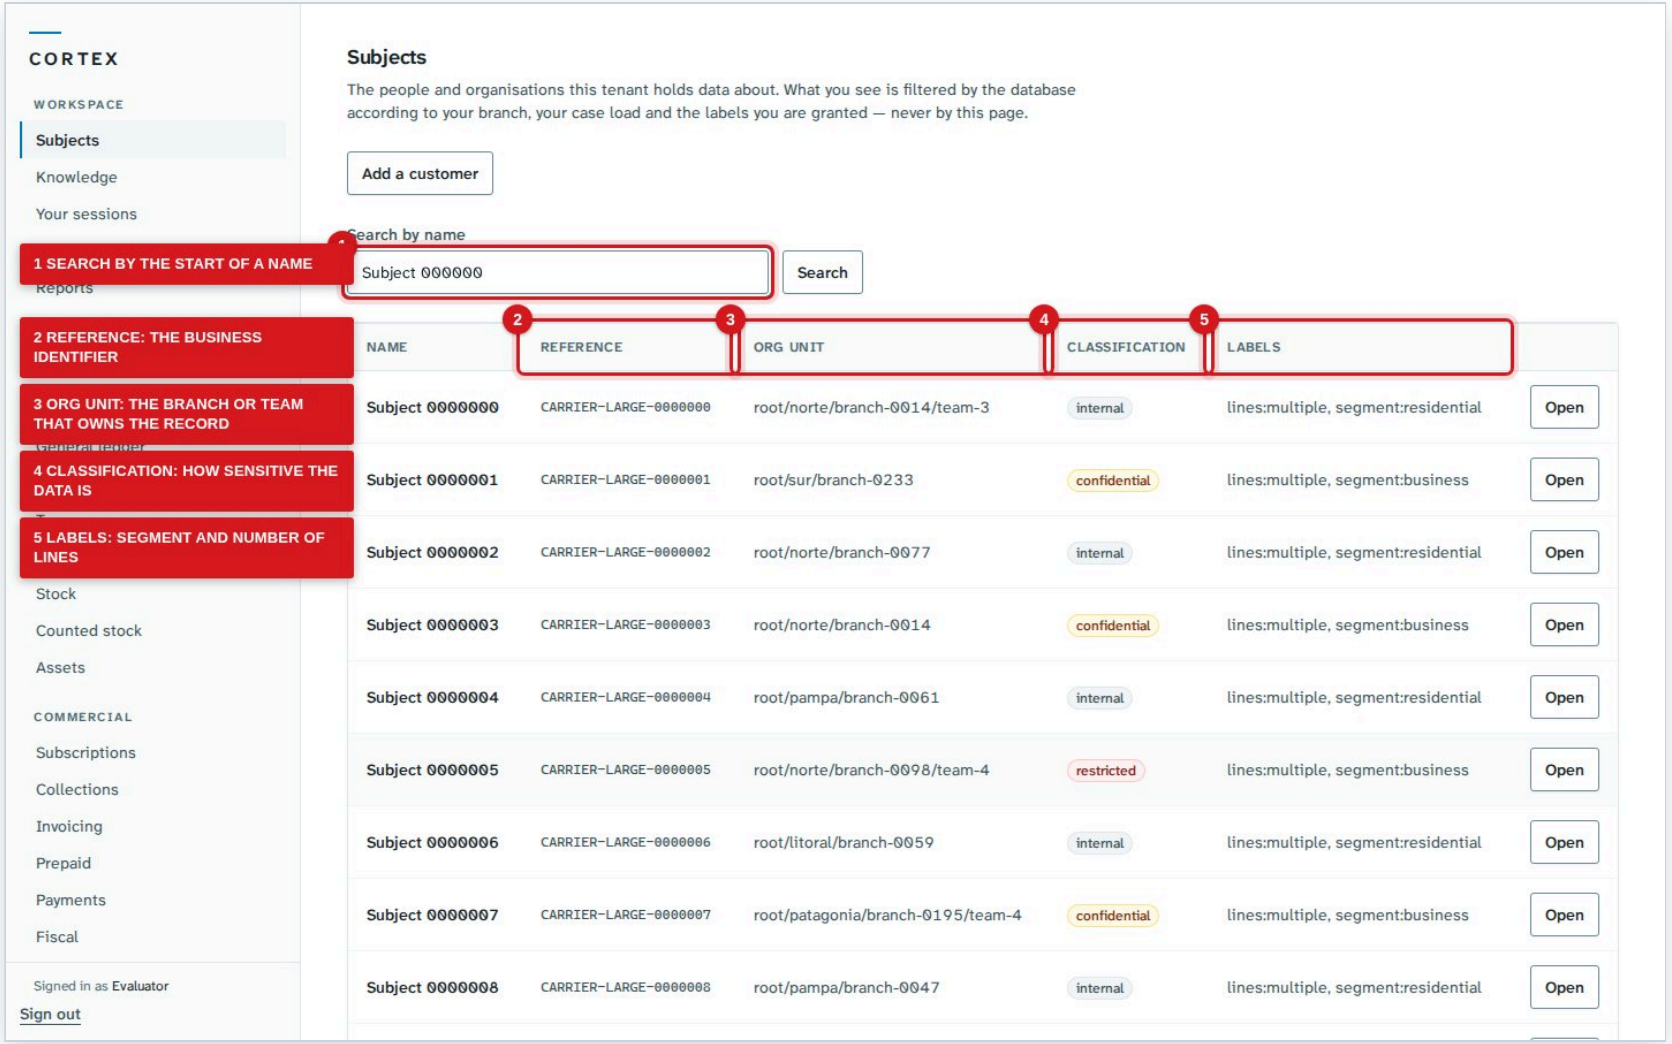

Some actions ask for a six-digit code: from an authenticator app, or python examples/evaluate/totp.py.

CORTEX BASIC GUIDE

Subjects: everyone the tenant holds

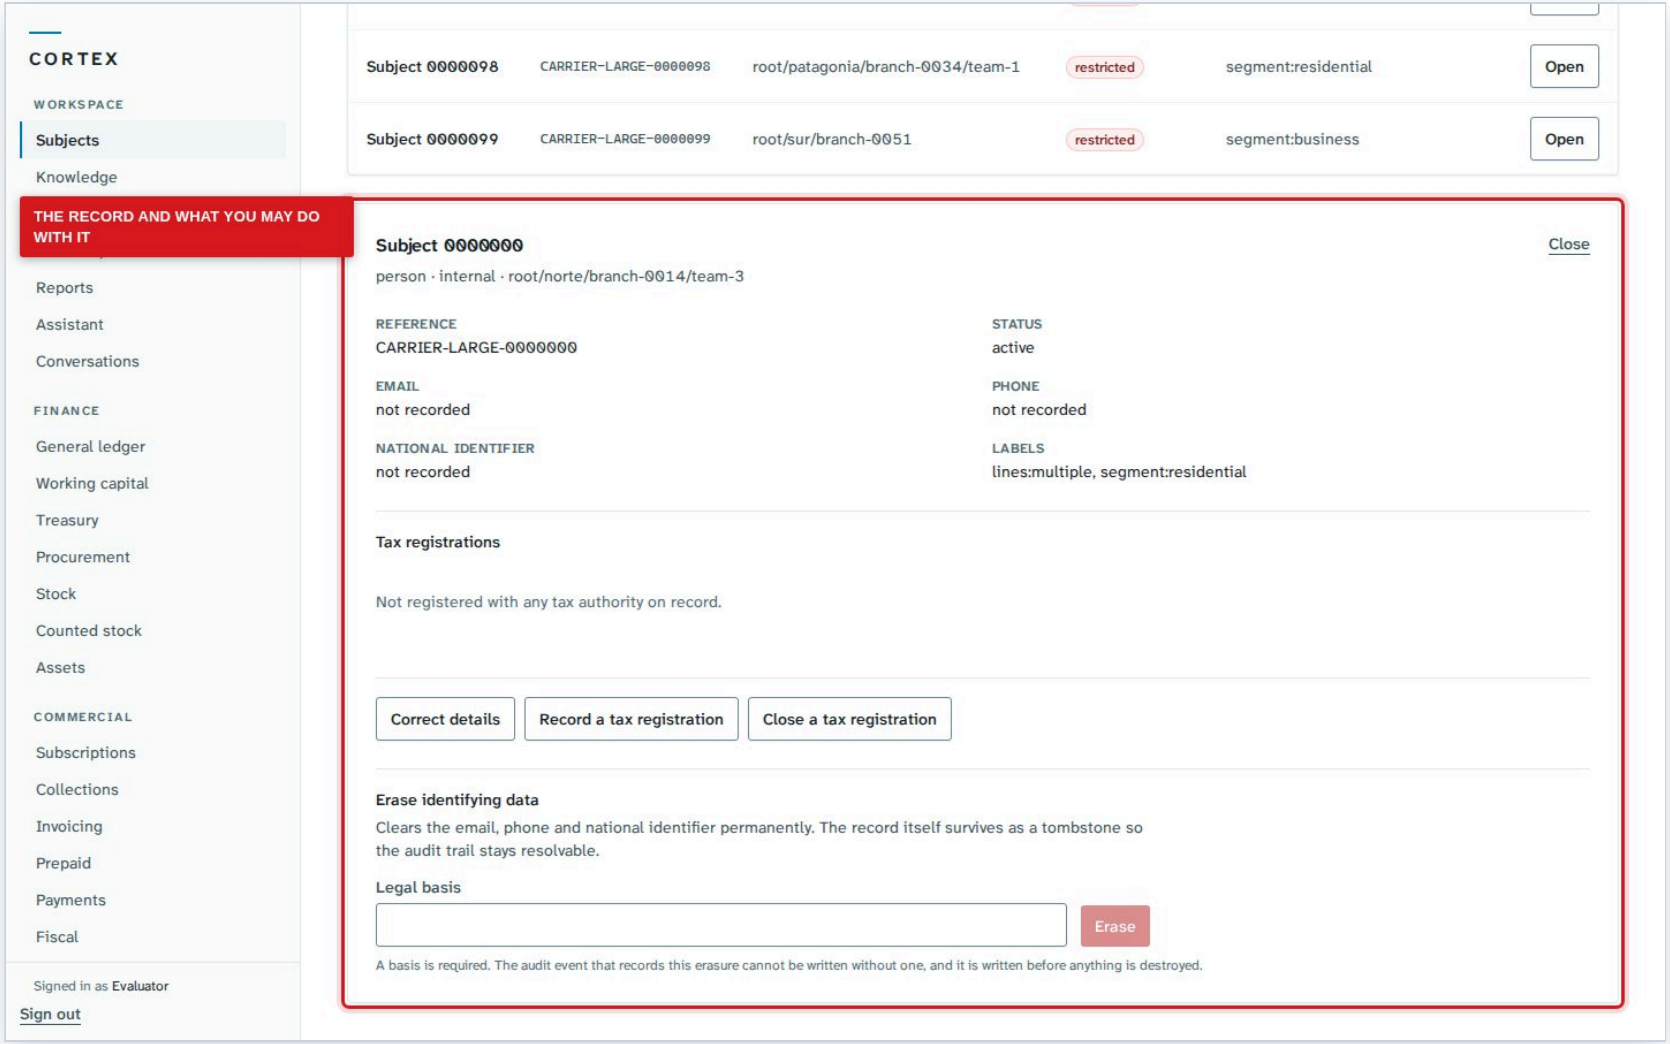

Reference, org unit, classification and labels, for every person and organisation.

CORTEX BASIC GUIDE

One subject, opened

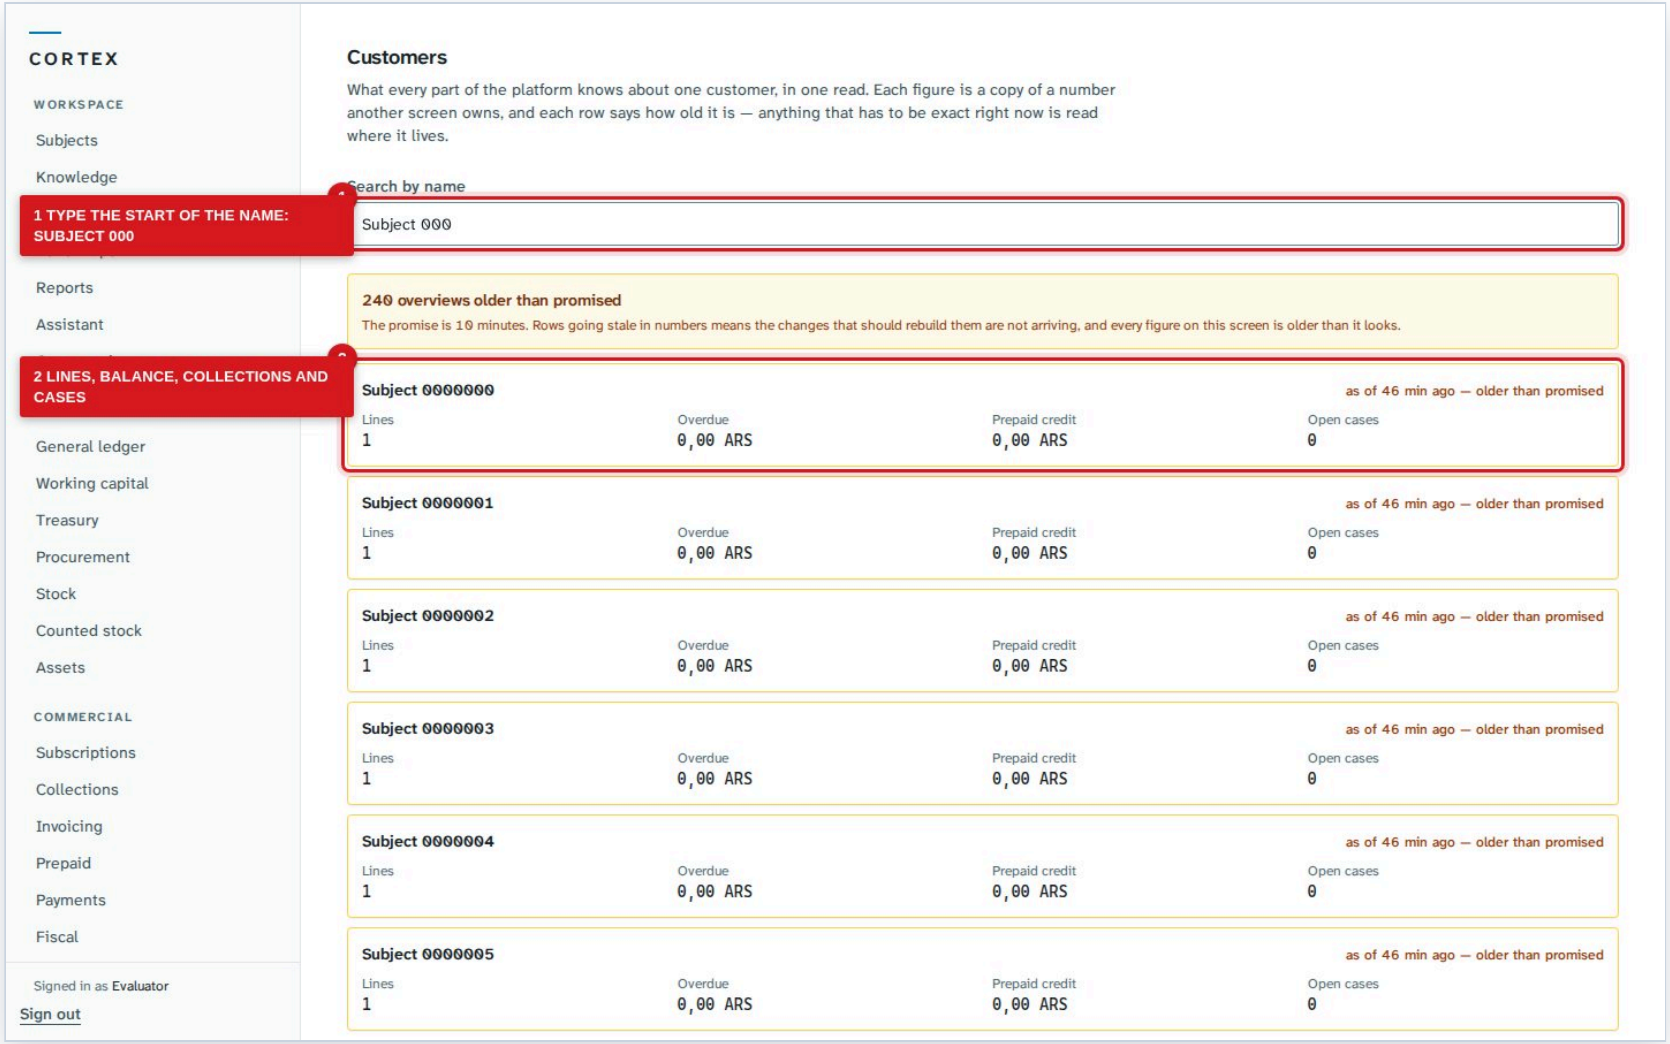

The record and the actions this account may take on it, decided by the server for this row.

CORTEX BASIC GUIDE

Customers: the 360° overview

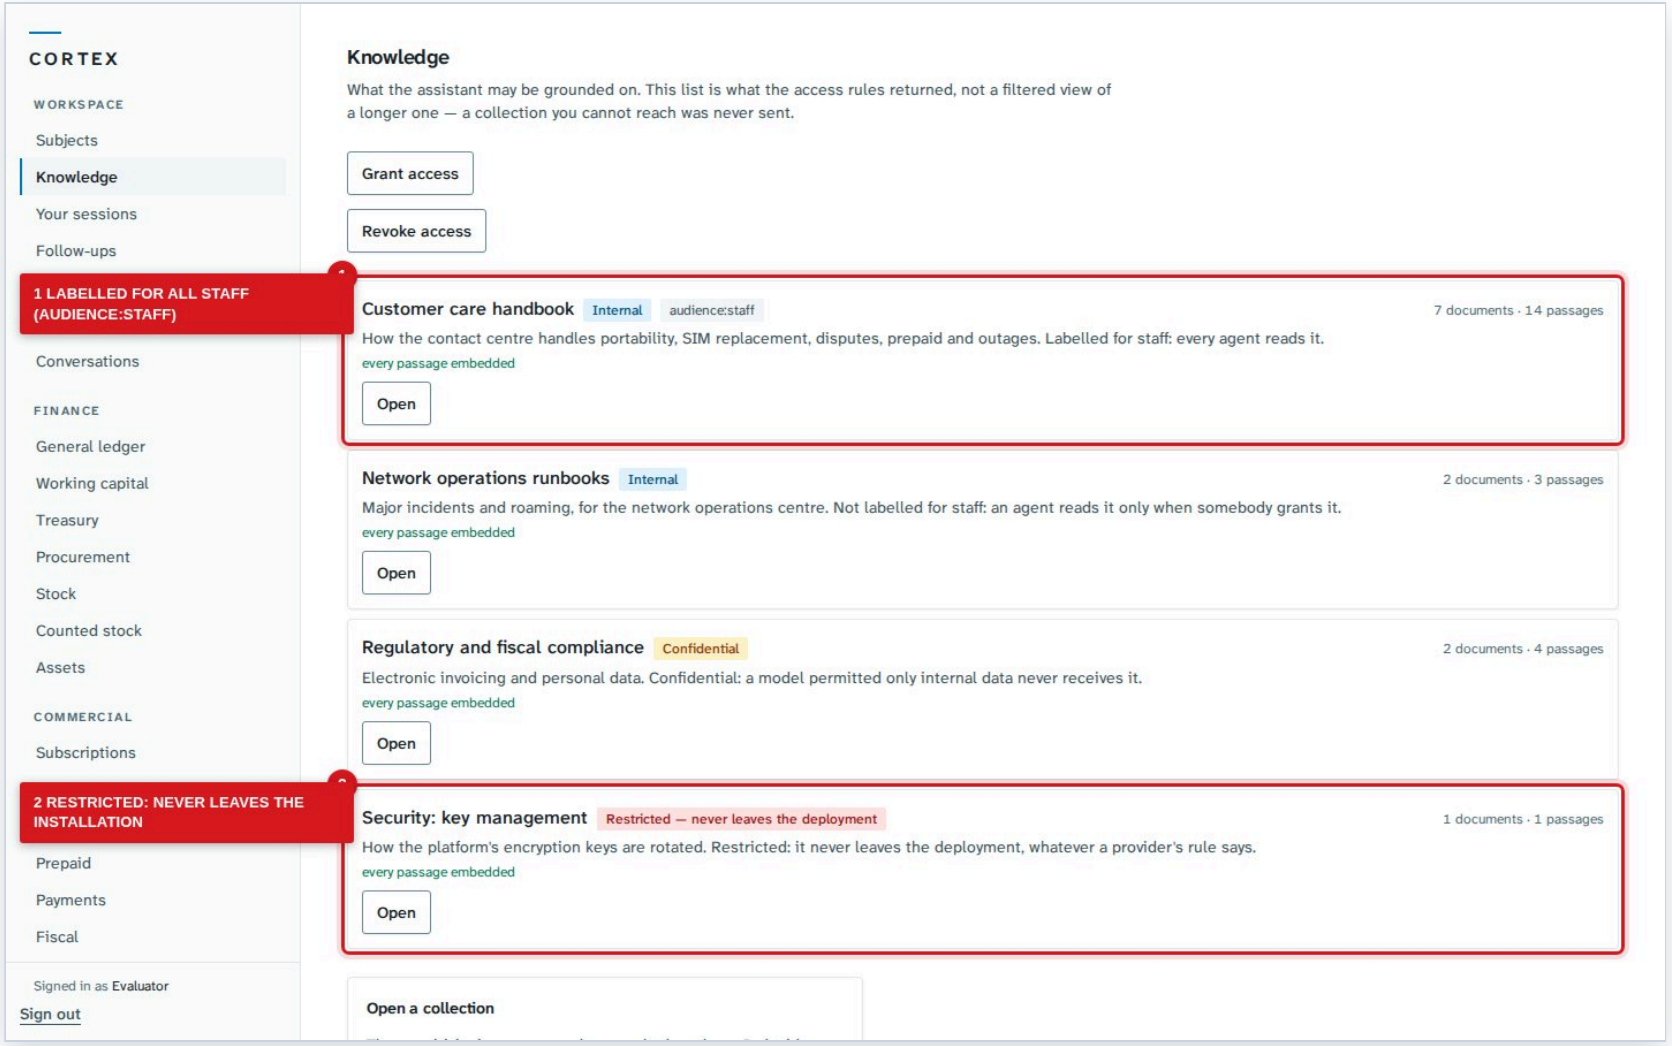

Type the start of a name (Subject 000): lines, balance and open cases on one row.

CORTEX BASIC GUIDE

Knowledge: collections of documents

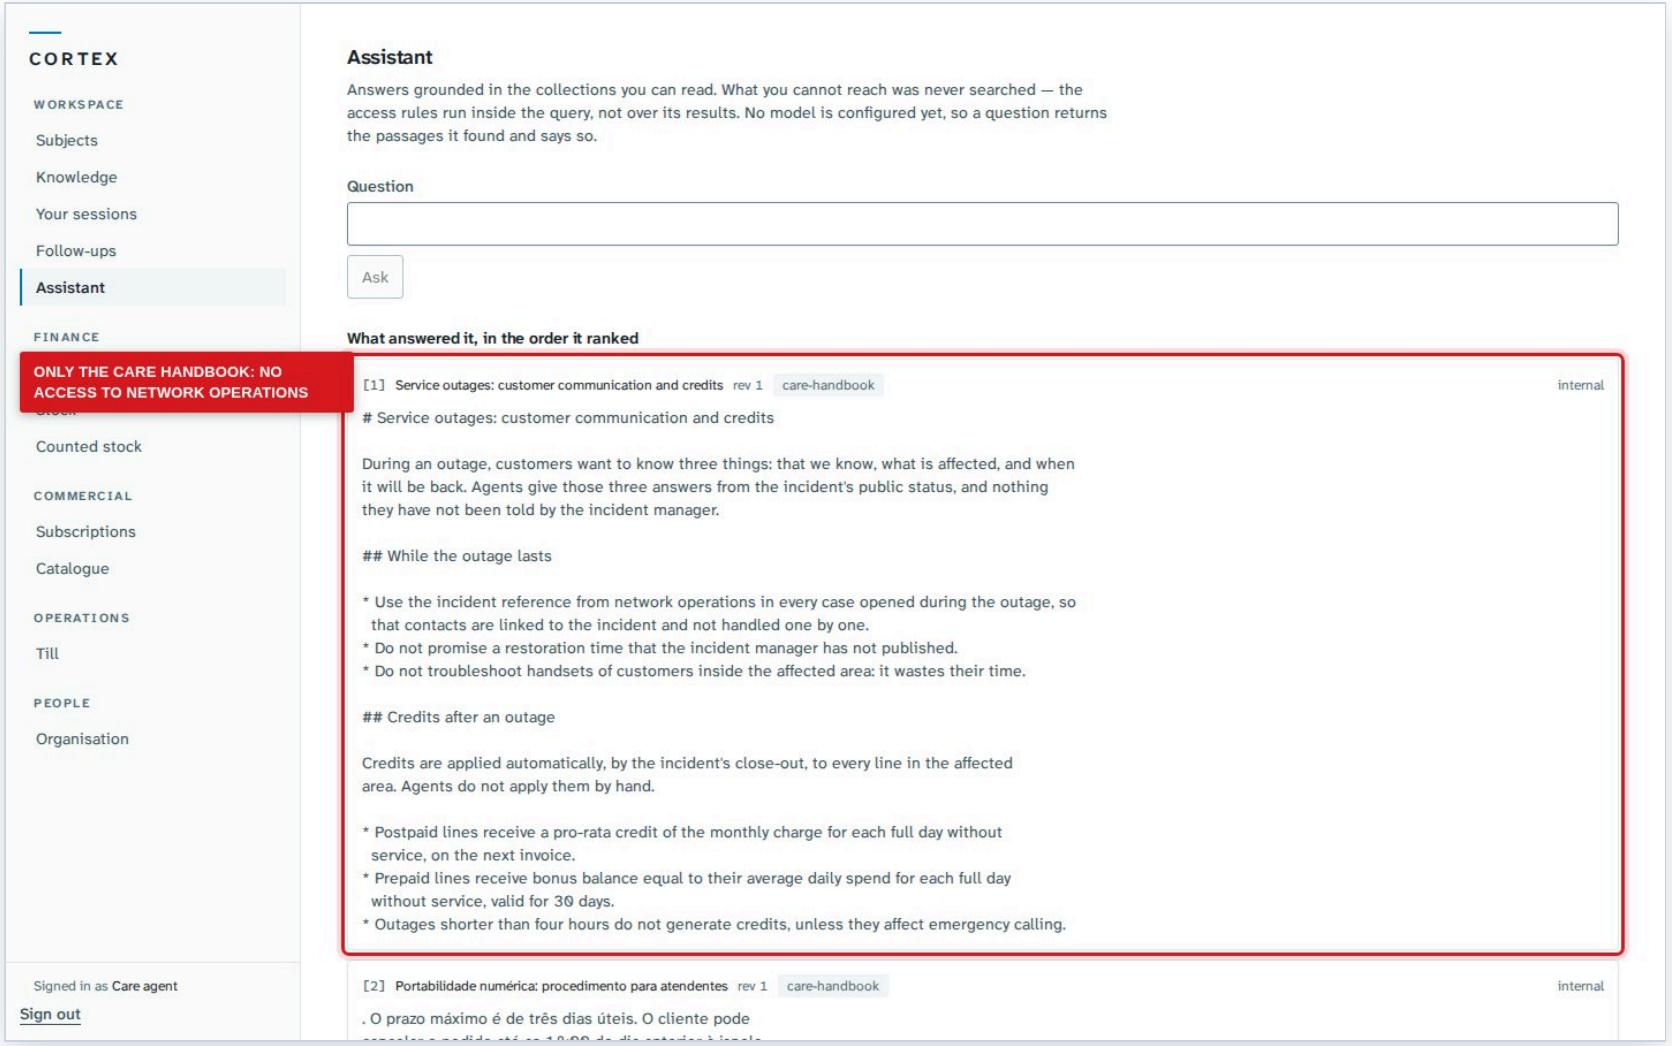

What the assistant may consult. Sensitivity decides what may ever reach an outside model.

CORTEX BASIC GUIDE

The agent, before a grant

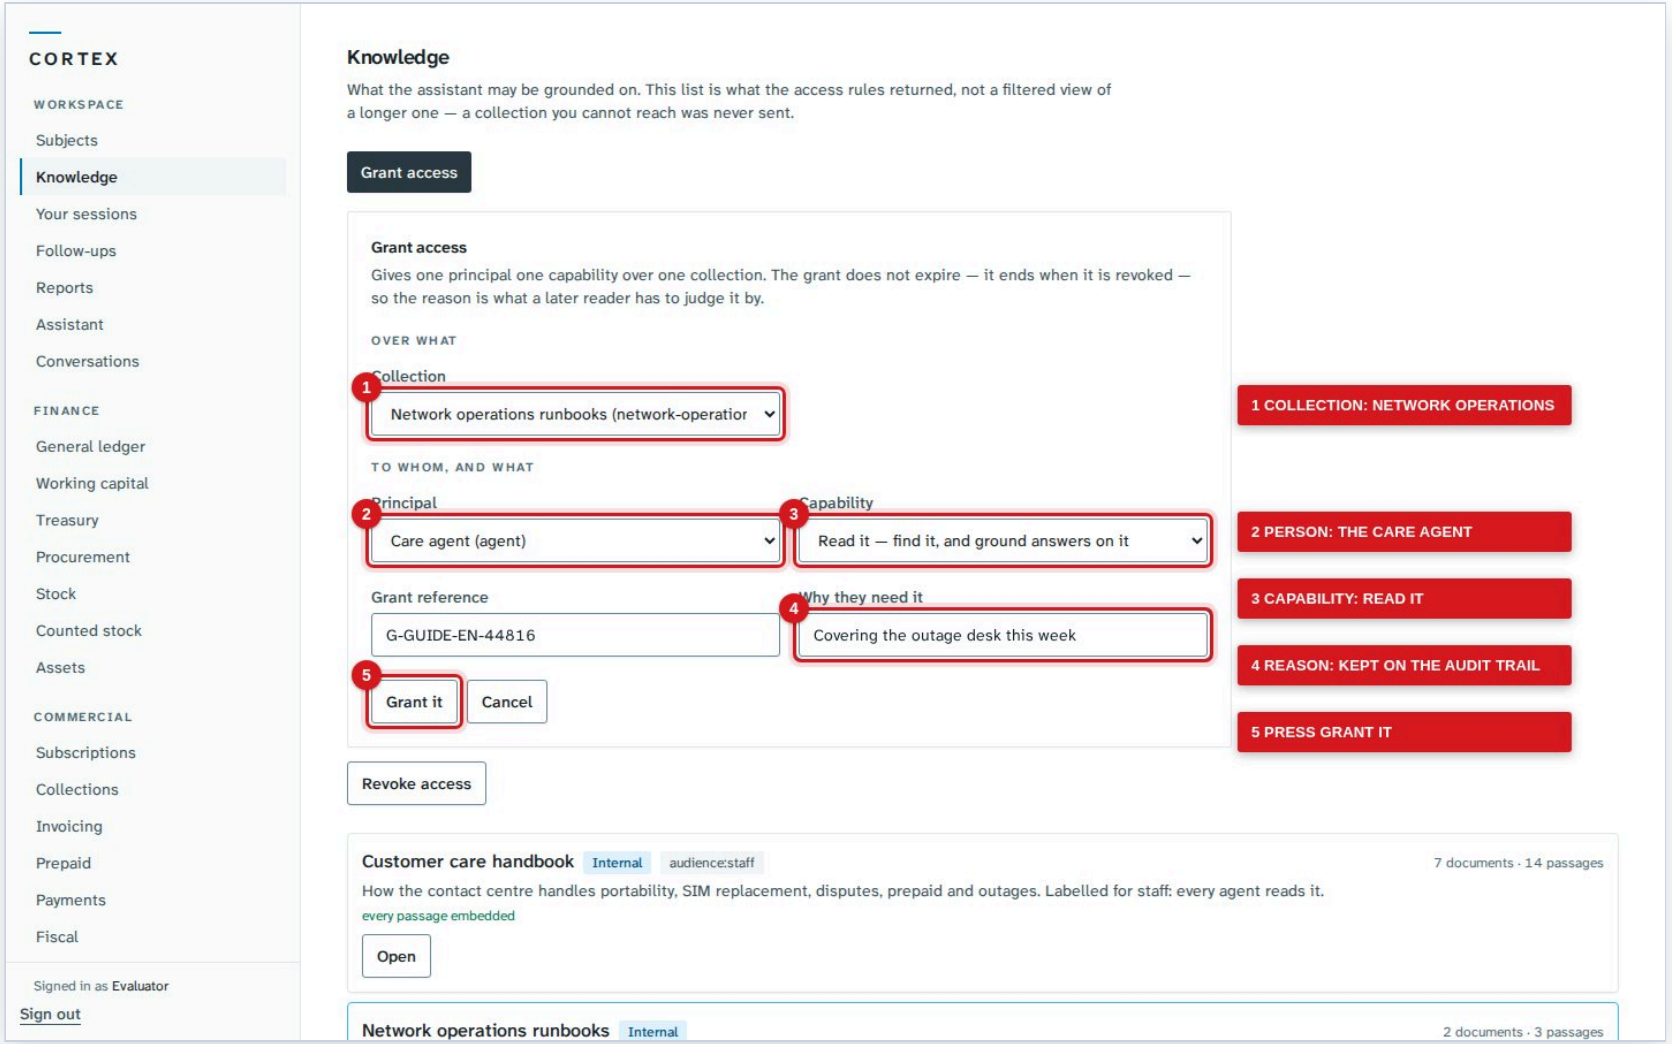

Signed in as the care agent: the answer comes only from the handbook labelled for staff.

CORTEX BASIC GUIDE

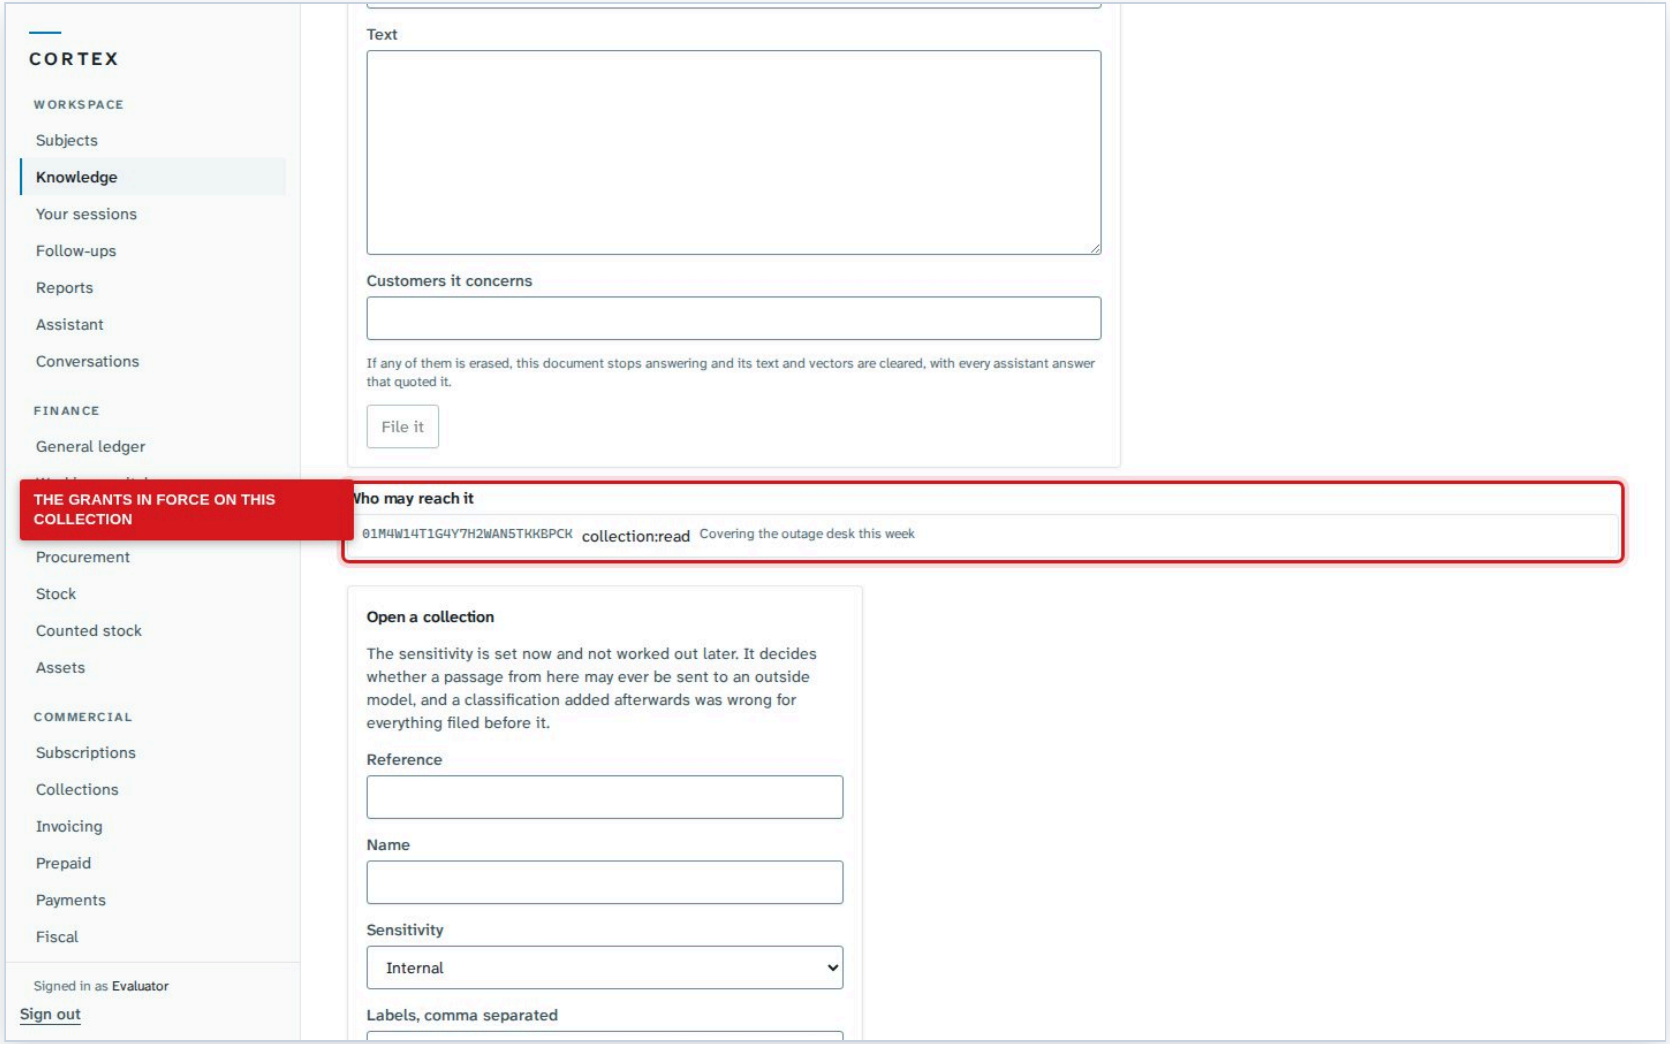

Granting one person one collection

Collection, person and capability by name; a reference and a reason, which the audit keeps.

Who may reach it

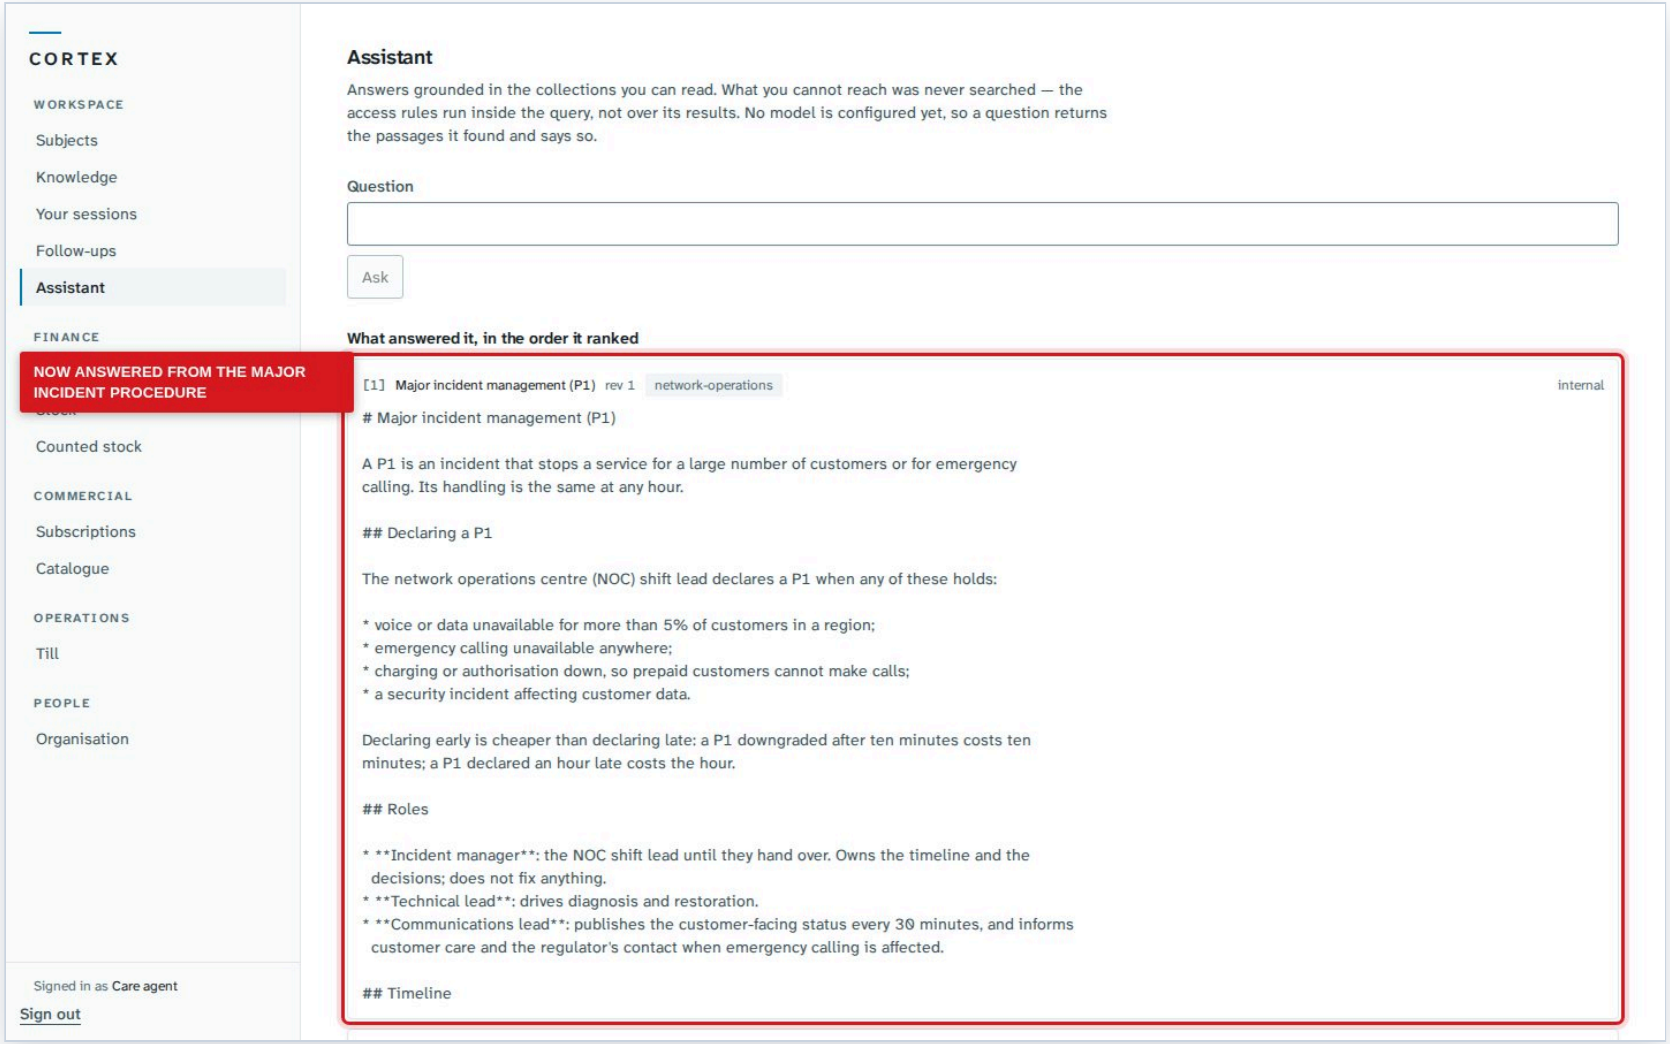

The grant is listed on the collection and holds until revoked.

CORTEX BASIC GUIDE

The agent, after the grant

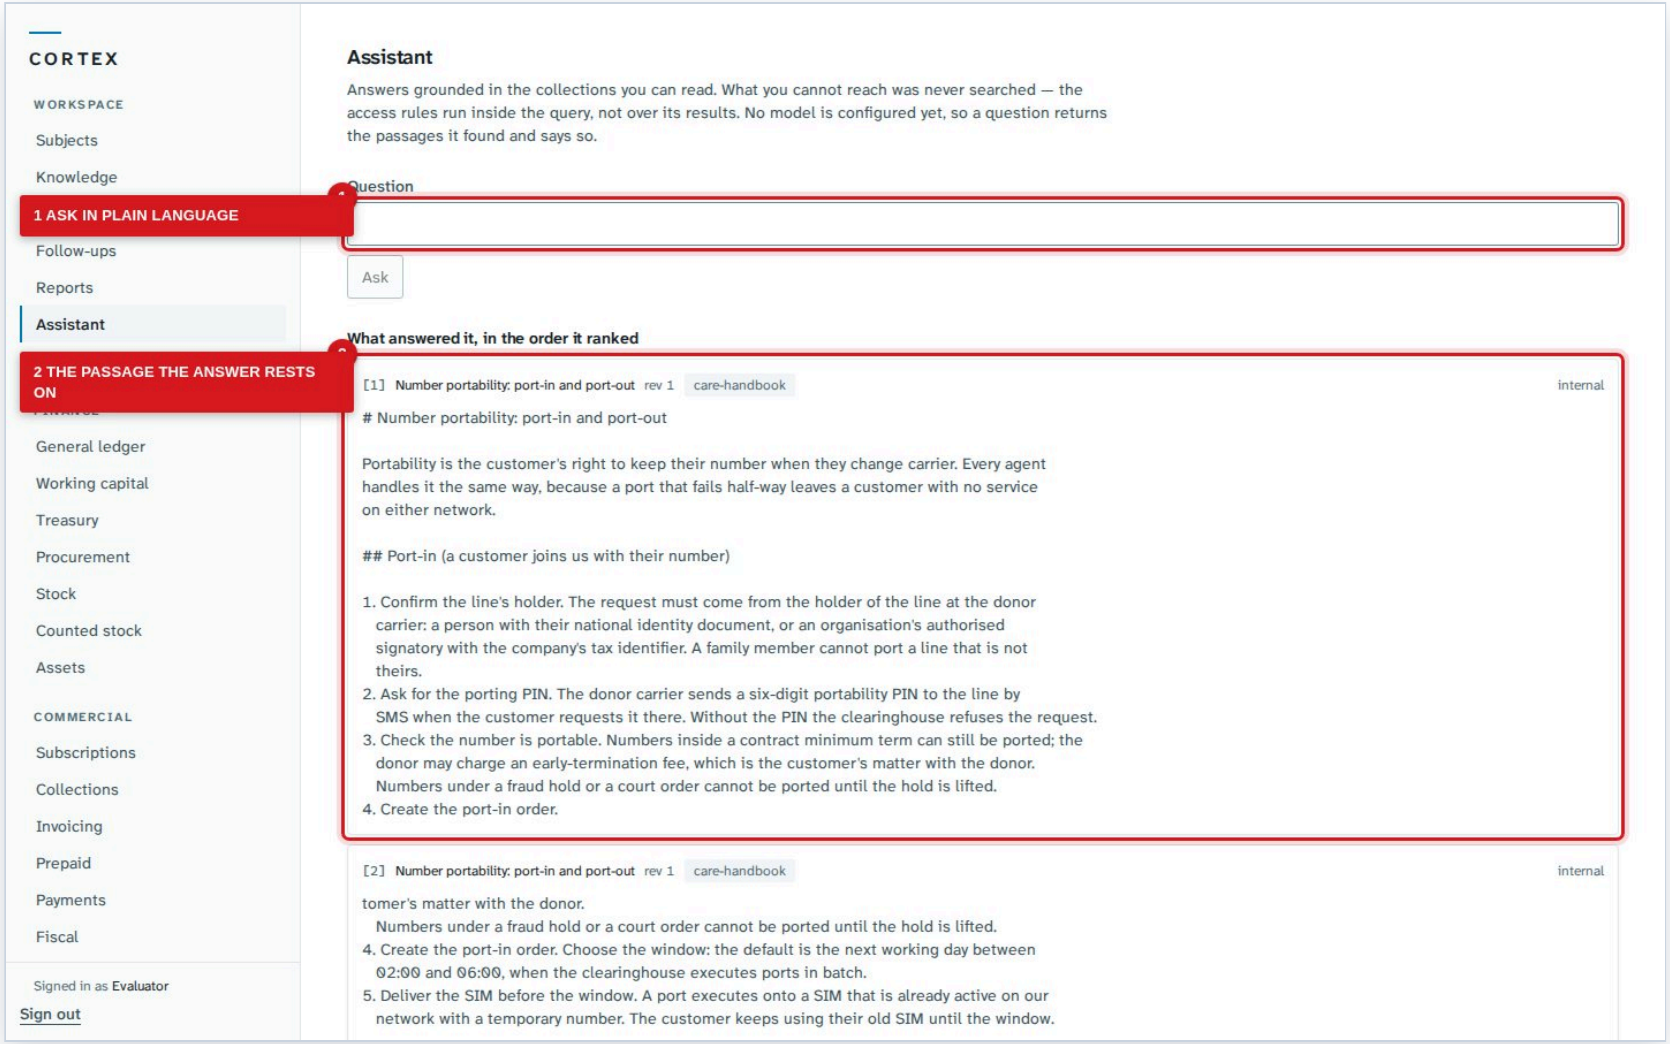

The same question: the answer now comes from the network operations runbooks.

CORTEX BASIC GUIDE

Asking the assistant

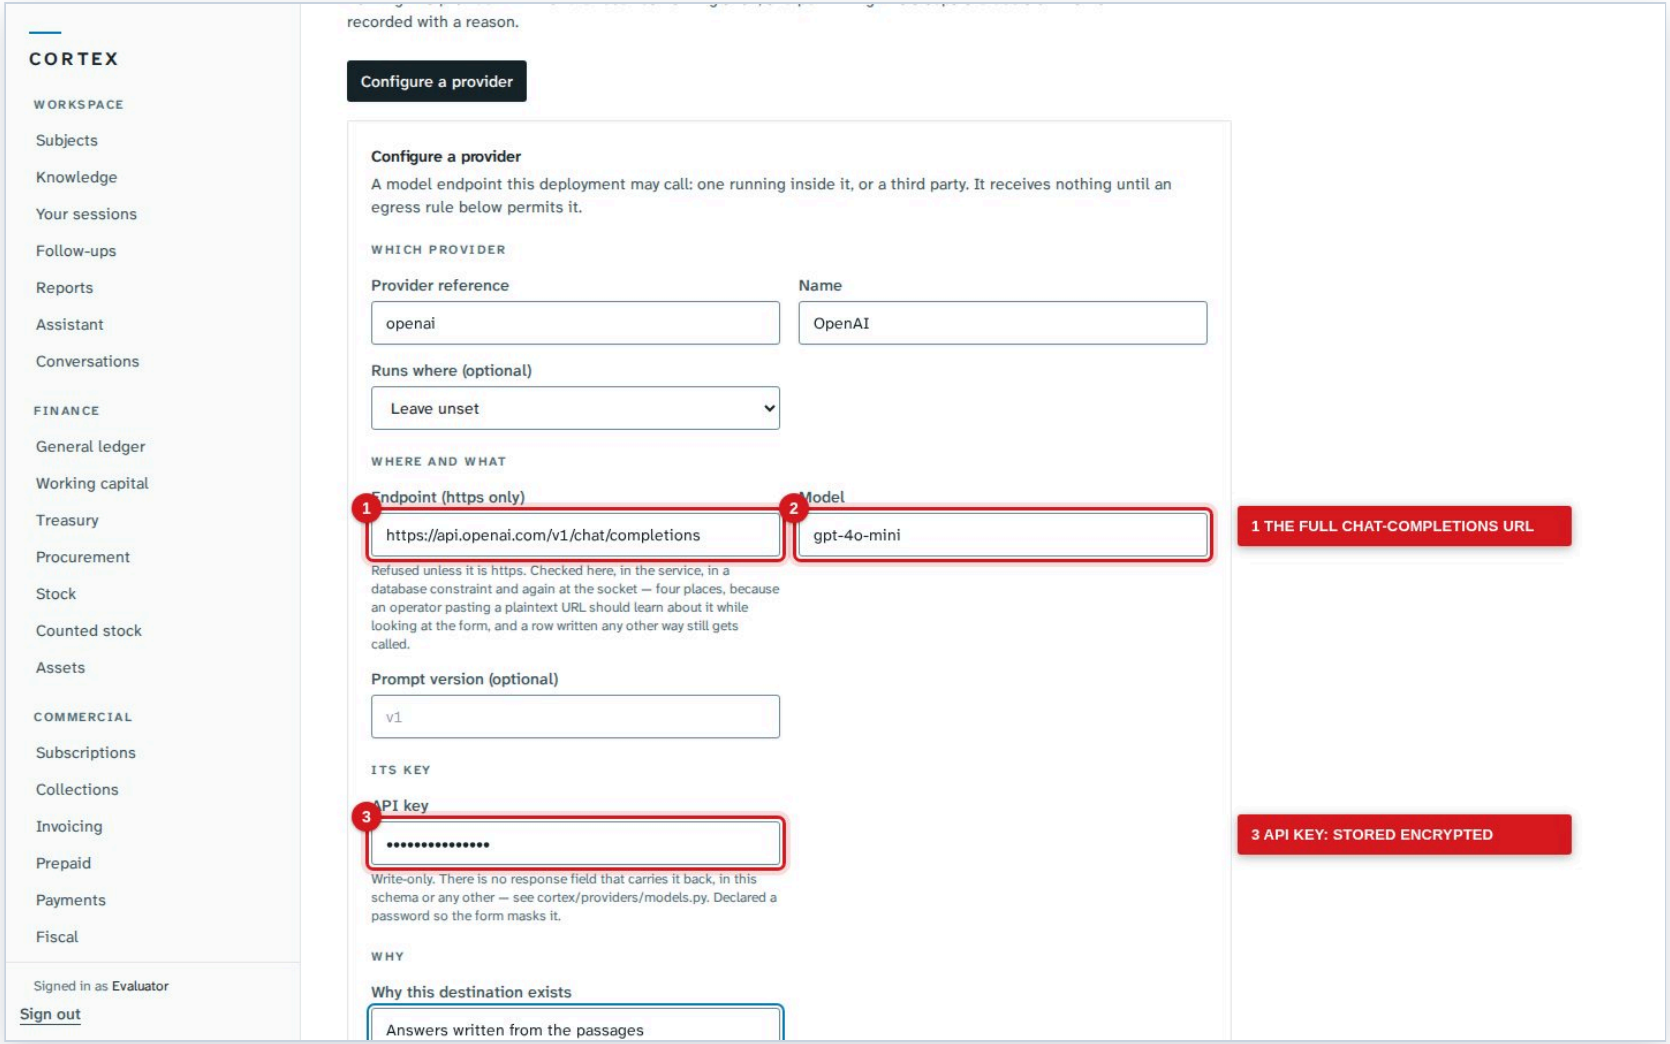

Passages ranked, each with its document, revision, collection and sensitivity.

CORTEX BASIC GUIDE

Configuring an AI provider

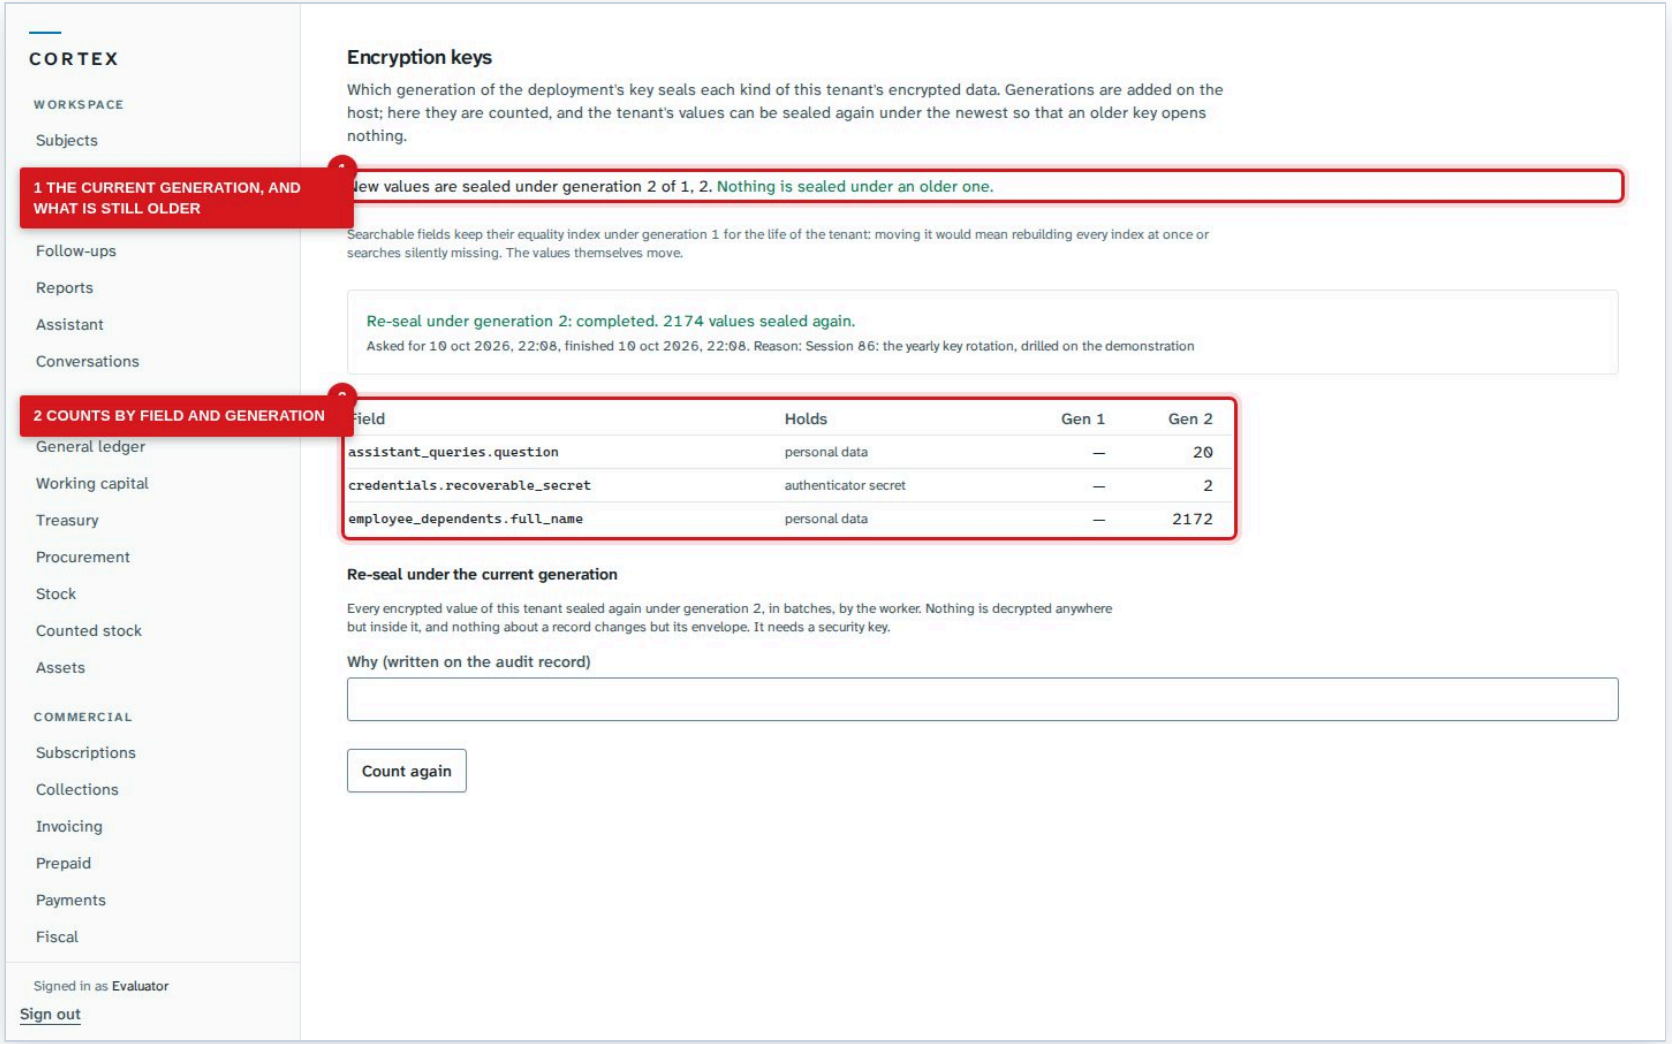

Any OpenAI-compatible endpoint, by its full URL. The key is sealed and never shown again.

ADDITIONAL INFORMATION

Encryption keys

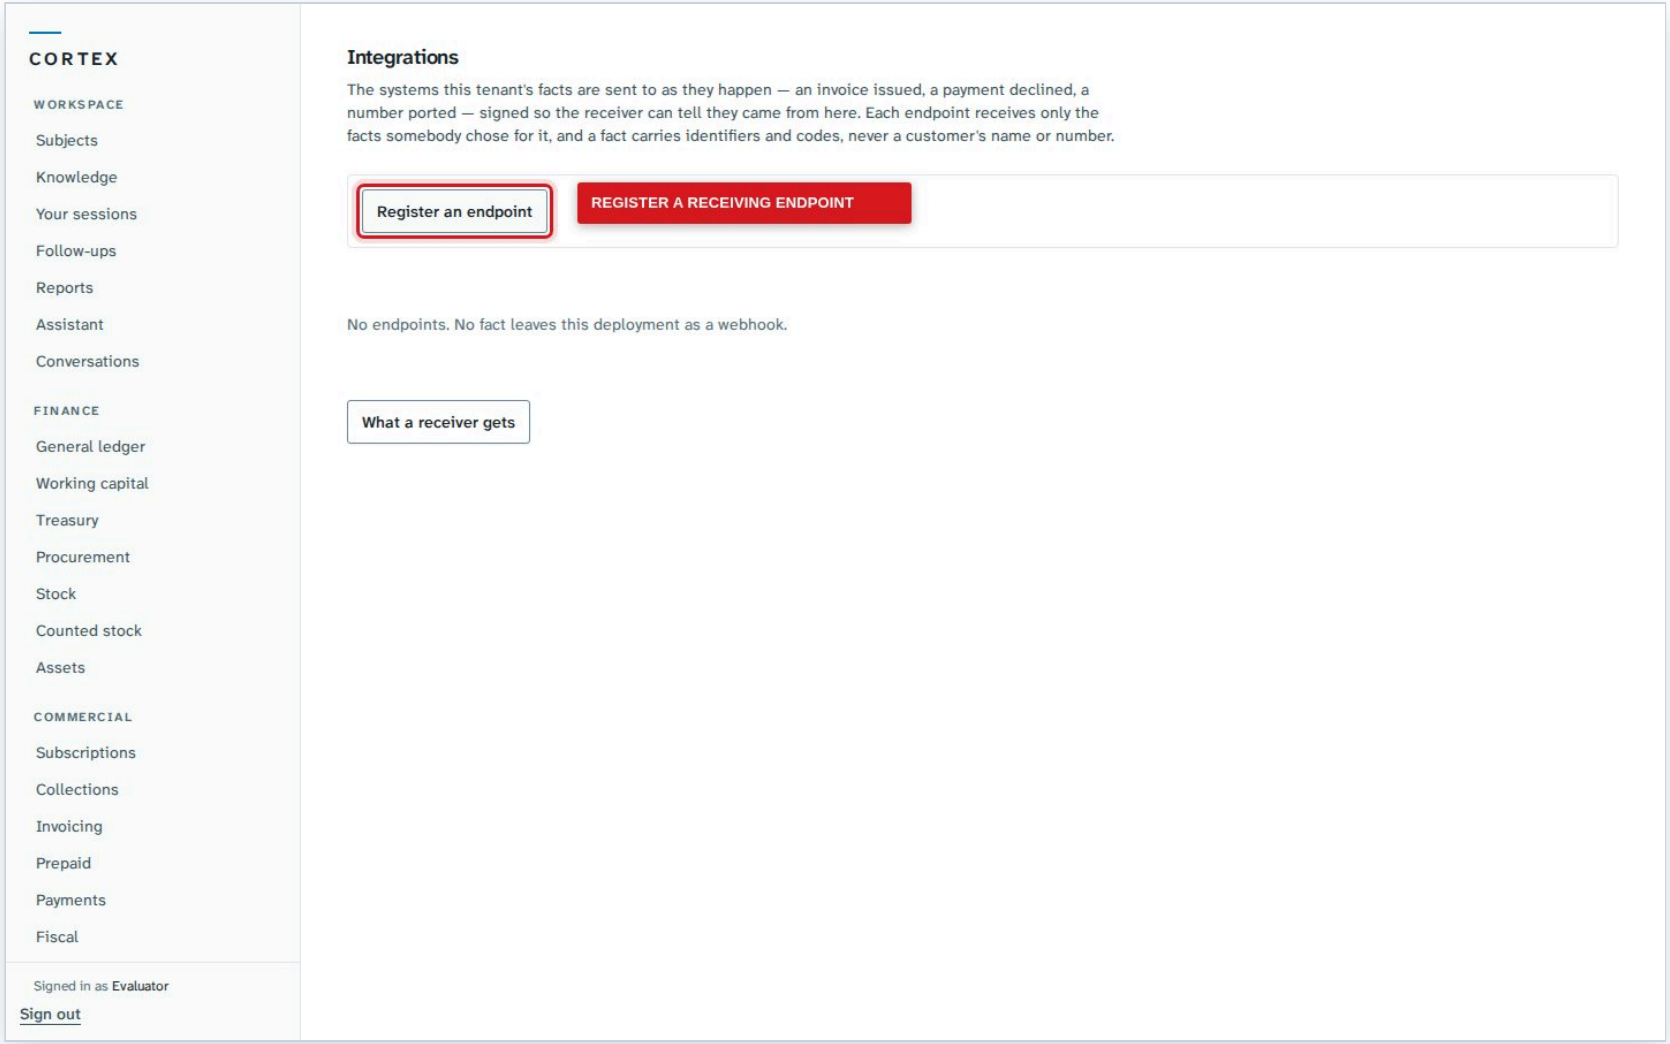

Which key generation seals each kind of personal data, counted without opening any.

CORTEX BASIC GUIDE

Integrations (webhooks)

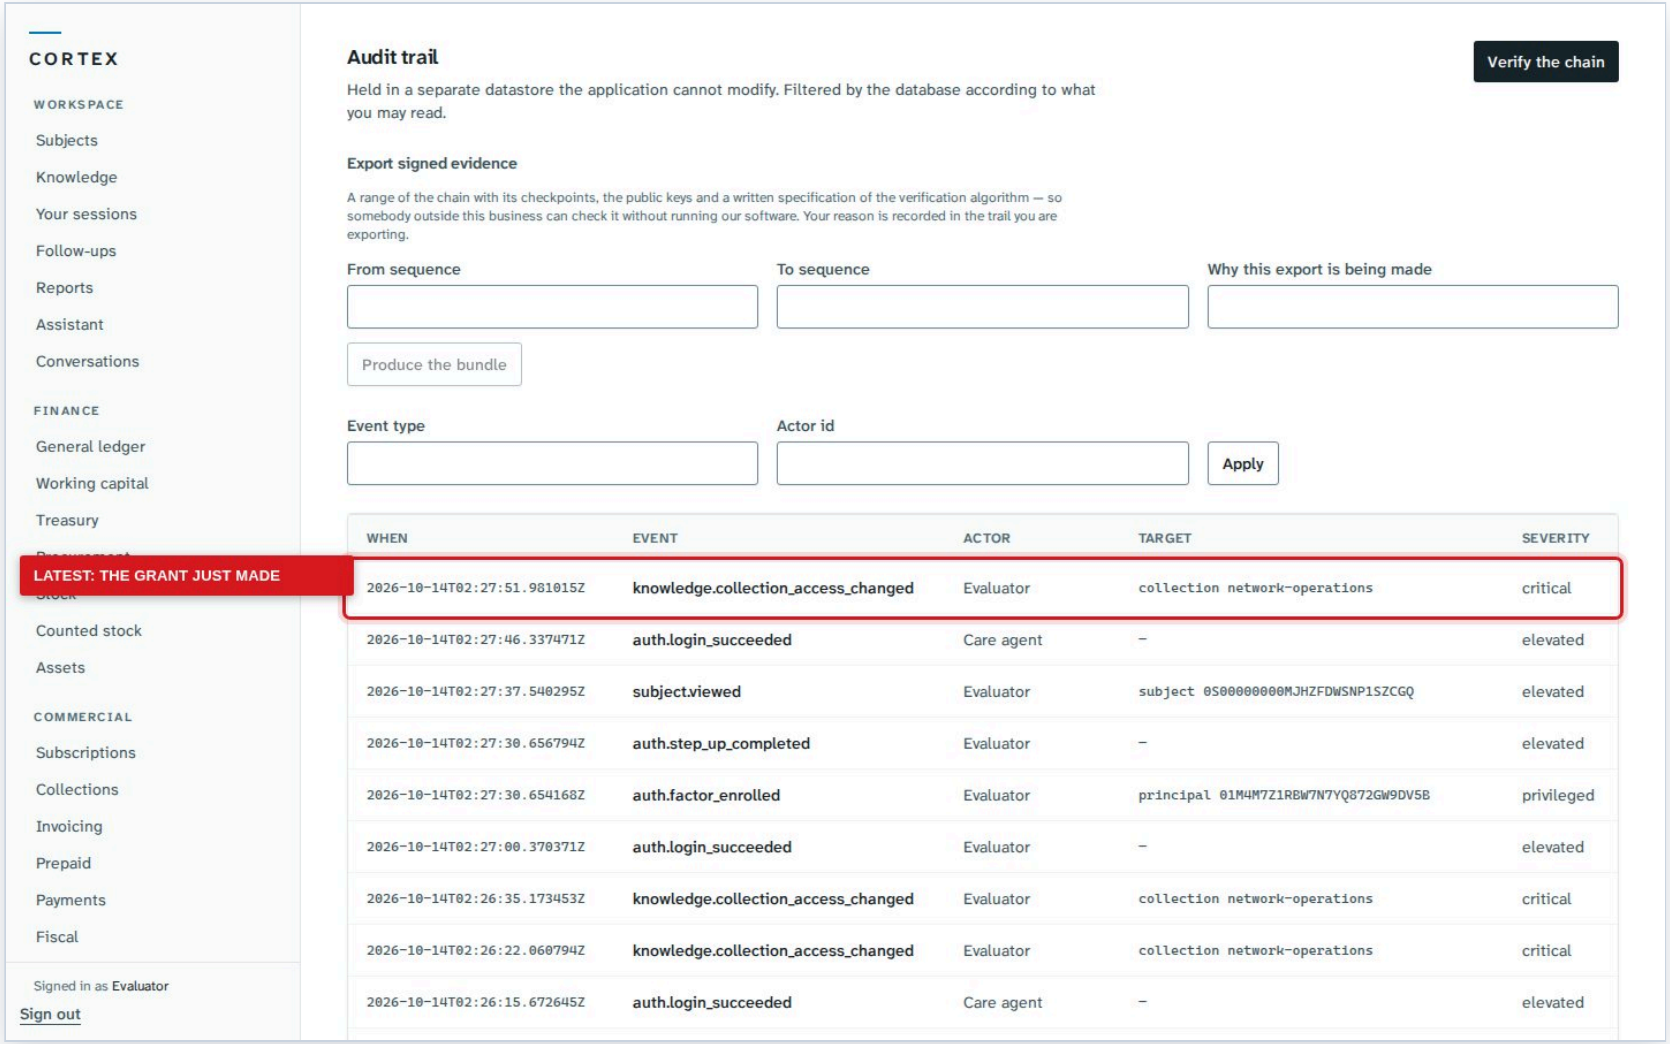

Register an endpoint, choose the facts, send a test ping, and see every attempt.

CORTEX BASIC GUIDE

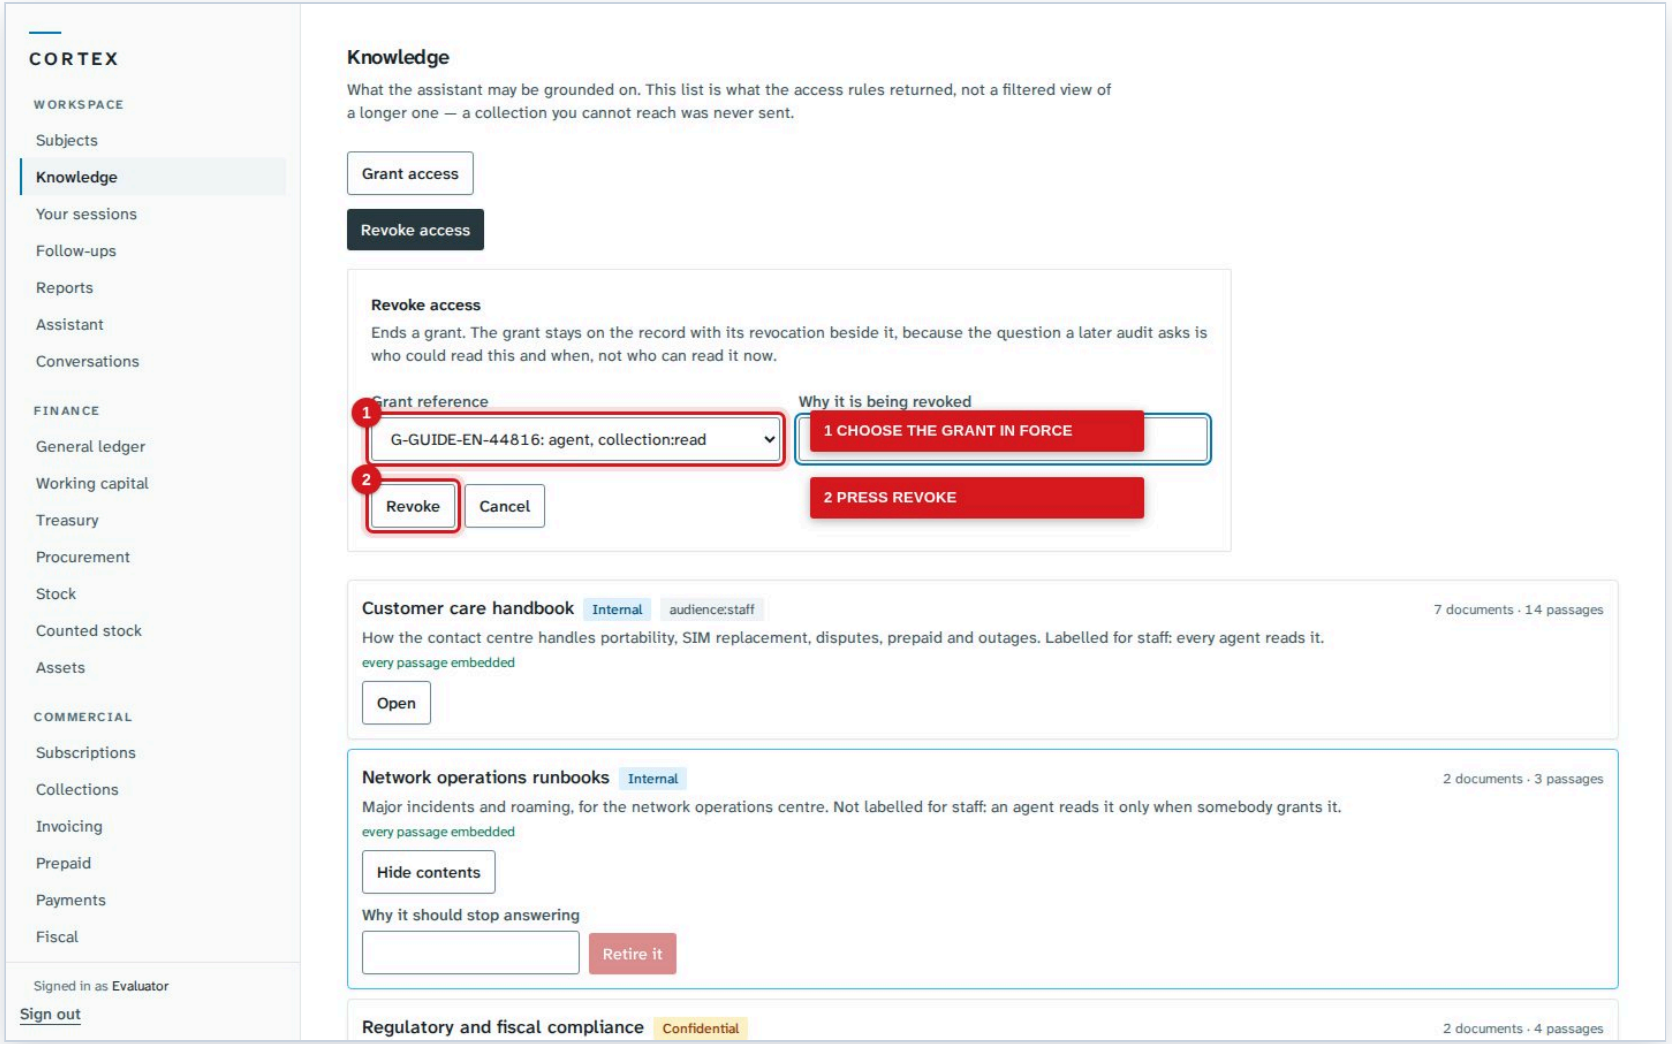

The audit trail

Every change, hash-chained; the grant just made is at the top.

Revoking access

The grant ends at once and stays on the record beside its revocation.

CORTEX BASIC GUIDE

Your sessions and password

Where this account is signed in. On the published accounts, the installation manages the password.
